VVNT SEQUOR

ASSURANCE FRAMEWORK — ONE-PAGE REFERENCE

How Security, Compliance & AI Assurance Connect

One engagement, many moving parts. Most compliance and technology work starts with a single driver, then needs to align with everything else. This is the framework VVnT SeQuor uses to make that explicit — four entry points, two practice groups in continuous dialogue, and one independent review.

4	2	1	1
ENTRY POINTS, ANY ONE WORKS	PRACTICE GROUPS, FEEDING EACH OTHER	CONTINUOUS LOOP, NOT A HANDOFF	INDEPENDENT REVIEW, SEPARATE FROM DELIVERY

WHERE IT STARTS — FOUR COMMON TRIGGERS

Customer audit
ISO cert · VAPT · VPAT

Investor review
Security & privacy gaps

Procurement checklist
SOC 2 · security RFP

Certification deadline
DPDPA · renewal cycle

TWO GROUPS, IN CONTINUOUS DIALOGUE

GROUP 01 — ASSURE & COMPLY

- Cybersecurity & Cyber Assurance
- ISO & Compliance Implementation
- Privacy & Data Protection
- Accessibility Assurance & Compliance

GROUP 02 — BUILD & ENGINEER

- GenAI & Agentic AI Development
- AI Testing & Evaluations
- Digital Testing & Automation
- Architecture & CIO/CTO Advisory

Group 01 defines what "good" looks like for Group 02 to build against — and AI testing & build-stage findings feed back to refine that bar. A continuous, two-way loop, the way NIST's AI Risk Management Framework and ISO/IEC 42001 both frame AI governance today — not a one-time handoff.

Independent assurance layer — VVnT Accreditation

Both groups are independently reviewed by VVnT Accreditation — VVnT SeQuor's independent AI & product assurance service. Its standards and SOPs are governed by VVNT Foundation, kept separate from VVnT SeQuor's delivery teams, so the review stays independent of the work it reviews.

`VVnT POC Assurance Certificate — Proof of Compliance`

Most clients start with one need and find we're already positioned to help with the rest. Talk to us about where your organization sits in this framework.
